

SCMart™ Suite

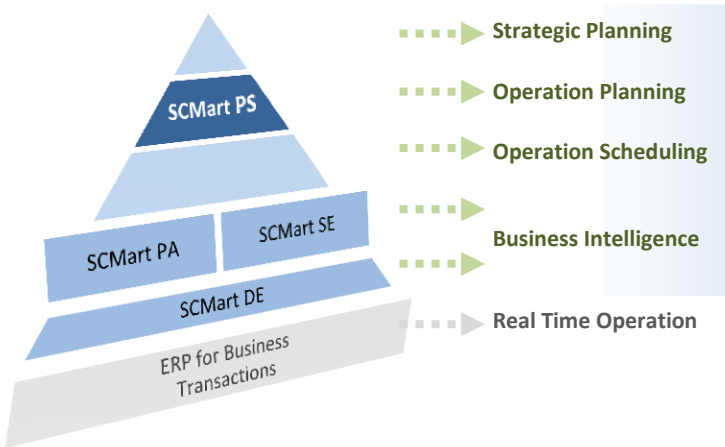

Business Optimization Software for Optimizing Your Supply Chain

Strategic Solutions through Optimization Science

The Optience SCMart™ Suite is comprehensive business optimization software with a unique platform. The uniqueness of this platform lies in its ability to scale flexibly from simple business intelligence applications to sophisticated supply chain applications that harness our technologies in optimization science.

Start with SCMart™ Modules that you need

SCMart™ Suite provides applications to support optimal decisions at each business level.

The SCMart™ Suite key features:

- ✓ Graphical approach for building supply chain applications
- ✓ Equation based approach for optimizing supply chain
- ✓ Unparalleled Data Visualization and Analysis capability
- ✓ Customizable user interfaces to fit your corporate workflow
- ✓ Open database architecture for easy connectivity to your corporate IT systems

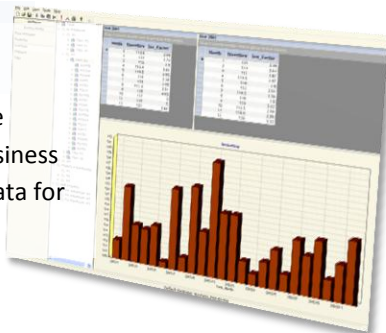

SCMart™ PS

Build, optimize and analyze your supply chain problem - from strategic and operations planning to scheduling in one environment.

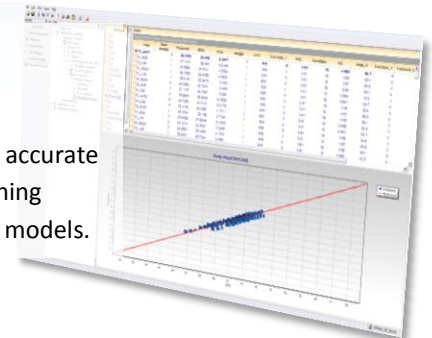

SCMart™ PA

Build business intelligence applications – Analyze business performance and share data for better business planning.

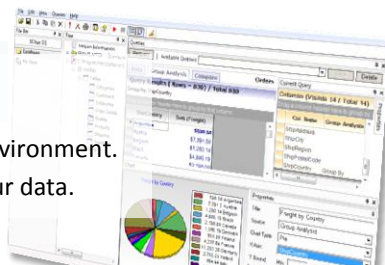

SCMart™ SE

Build better correlation of manufacturing units for an accurate representation of the planning model. Supports nonlinear models.

SCMart™ DE

Explore data in various database systems in one environment. Discover a simpler way to view and understand your data.

SCMart™ PS

Optimize your Supply Chain – The SCMart™ Way

Strategic Solutions through Optimization Science

SCMart™ PS is a unique platform for building supply chain optimization applications. The uniqueness of this platform lies in its ability to scale flexibly from business intelligence to sophisticated supply chain optimization applications. From Strategic Planning to Production Scheduling and Logistics, SCMart™ PS provides a seamless environment to optimize your business.

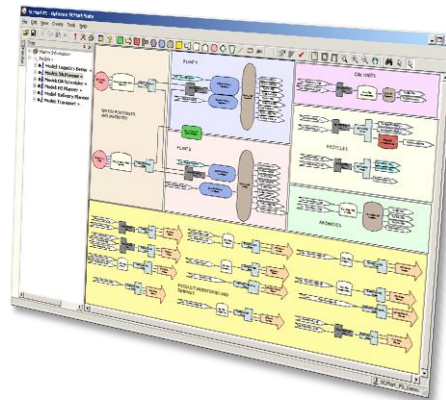

Visualize your Supply Chain

SCMart™ PS provides the first flow sheet based tool for building your supply chain optimizer. You can build your supply chain from a palette which provides a rich set of units such as ships, tanks, reactors and your own custom processes.

Our task based supply chain representation allows you to consider both business issues as well as manufacturing issues. Business issues may range from inventory policies to resource allocation, while manufacturing issues may include reactor yields and separations.

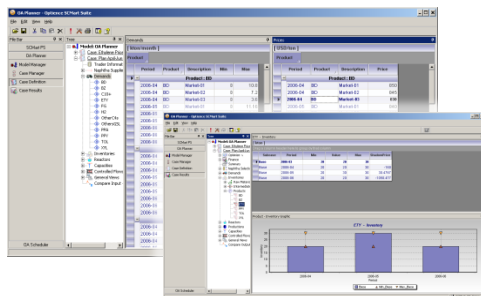

Sophisticated optimization algorithms implemented in SCMart™ PS are used to solve the models. Our solutions have been proven in applications at leading companies across the globe.

Based on this representation, SCMart™ PS automatically generates the mathematical models to optimize your business.

Enter economic and plant data through flexible grids and forms that allow data transfer from different sources.

Customize how you view your Optimization results for a better understanding of your plant and business.

Start using SCMart™ PS

Discover the environment that makes SCMart™ Suite the leading business optimization system.

Main Features

Flow sheet environment for Supply Chain Optimization:

- ✓ Task based representation
- ✓ Multiple process and business oriented tasks

Wide range of applicability:

- ✓ Olefins and Aromatics
- ✓ Feedstock Blending
- ✓ Polyolefins Planning
- ✓ Refining
- ✓ Product Logistics

Proven Technology for Large Scale Optimization:

- ✓ Linear Programming
- ✓ Nonlinear Programming
- ✓ Mixed Linear programming
- ✓ Mixed Nonlinear Programming

Rich and Customizable Visualization Framework:

- ✓ Optimization Case Management
- ✓ Customizable graphs, grids and forms

Seamless Integration:

- ✓ Generate reports in Excel.
- ✓ Export/Import data to/from your corporate IT/ERP System.
